# Take command with Aqua Logic®

Through manual or programmable operation, you can set Aqua Logic to control your pool, spa and so much more. You can customize your pool's filtration to operate at desired levels for specific times, such as longer hours during weekends or for shorter run times during weekdays. Aqua Logic can even control your pool heaters (gas, electric and solar) to deliver the temperature you want, when you want it. Spa jets. Pool lights. Water features. You name it. You can maintain total control of your entire system with Aqua Logic.

## Your backyard at your fingertips.

The intelligent design of Aqua Logic controls not only your pool and spa, it even controls the electronic operations within your backyard environment. That includes other AC-powered items that operate in an on/off fashion in your backyard and around your pool. Additional products can include outdoor lighting, fans, certain water sprinkler systems, music and more.

## Know what's on and off at a glance.

Customizable buttons illuminate when the designated equipment is operating. The digital readout runs through a continuous cycle of information, including time, date, outdoor temperature and water temperature. It can even

display the salt level of your electronic chlorine generator.

Aqua Logic gives you complete control of your backyard environment in one simple, easy-to-use package.

## Integrated Electronic Chlorine Generator control.

Unlike other controllers,

Aqua Logic can control an

automatic electronic chlorine generator, that's capable of providing a more convenient method of sanitation (compared with factory-created chlorine).

The combination of remote-control functionality and electrolytic water purification capability makes Aqua Logic an unmatched value in quality and total system control.

## Control. Everywhere you go.

Aqua Logic controls your entire backyard environment from inside your home, poolside or while you're in the water. Control options for Aqua Logic include a hardwired wall mount controller, floating controller and a tabletop wireless controller.
